“Do-It-Yourself” Stencils (New/Used Discs) : HOW TO DYE.

CustomDiscGolfDyes.com - How We Dye!

What you need

- A Bucket
- A Plastic Cup
- A Small Paint Brush
- Liquid Rit Dye (a container is enough to do about 50 discs!)
- Rubbing Alcohol
- A Towel

The Steps (Total Time is less than 10 minutes)

- Fill a large bucket/pot with clean water. Make sure it's deep enough to completely submerge a disc.
- Remove the stamp from the disc.
- Clean and Dry the disc.
- Place the CustomDiscGolfDyes.com Stencil on the disc. **Be sure push down on all the edges and remove all bubbles that are near the artwork!!!**
- **NOTE:** Do not tuck the vinyl edges under the disc! Let the edges lay flat so that any excess dye runs off and away from the disc.
- In a plastic cup, mix liquid Rit Dye and Isopropyl Alcohol (the stronger the better) together. 2/3 Rit Dye & 1/3 Alcohol.
- With a fine paintbrush, paint the mixed solution on top of your disc. You don't need much, but apply several coats. Approximately one coat every minute for several minutes.
- Let the disc dry for several minutes.
- When you think the dye is dark enough; take the disc and fully submerge it in the bucket of water. Dunk it several times and use your hands/rag to wipe off the dye.
- Inspect the disc. If you want to deepen the color and/or add additional colors – completely dry the disc and repeat these steps.
- **NOTE:** Be sure to press down on all the edges and bubbles before re-dying the disc.
- When your disc is finished – tare off the stencil and dry it. Tweezers are useful.
- **NOTE:** If there is some 'sticky' left behind from the vinyl that was on the disc; wait about an hour and rub it clean using the isopropyl alcohol.

Cheers!
