Dye Your Discs At Home!

What you need

1. A Bucket or Large Pot
2. A Plastic Cup or Glass
3. A Small Paint Brush
4. Liquid Rit Dye
5. Rubbing Alcohol
6. Nail Polish Remover (Acetone)
7. A Towel

Dyeing Steps (Total Time is less than 10 minutes)

1. Fill a large bucket/pot with cold clean water. Make sure it's deep enough to completely submerge a disc.
2. Remove the stamp from the disc with Nail Polish Remover (Acetone).
TIP: White Star Line Discs are the best for dyeing, then Pro Line and then Champion. Dyeing a colored disc (e.g. blue dye on a red disc) may produce inconsistent results.
3. Clean and Dry the disc.
4. Carefully remove the stencil from the sheet using the clear masking tape. Start with a corner and gently pull the clear masking tape (with the stencil attached) off the sheet.
TIP: GO SLOW! If any of the vinyl appears (or begins) to be left behind on the sheet, carefully roll the clear masking tape back onto the sheet, press down on the vinyl through the masking tape and then continue removing the clear masking tape.
5. Place the CustomDiscGolfDyes.com Stencil on the disc. **Be sure to push down on all the edges and remove all bubbles that are near the artwork!!!**
TIP: Do not tuck the vinyl edges under the disc! Let the edges lay flat so that any excess dye runs off and away from the disc.
6. In a cup, mix liquid Rit Dye and Isopropyl Alcohol (the stronger the better) together. 2/3 Rit Dye & 1/3 Alcohol. MIX WELL AND STIR CONTINUOUSLY.
7. With a fine paintbrush, paint the mixed solution on top of your disc. You don't need much, but apply several coats. Approximately one coat every minute for several minutes.
8. Let the disc dry for several minutes.
9. When you think the dye is dark enough; take the disc and fully submerge it in the bucket of cold water. Dunk it several times and use your hands/rag to wipe off the dye.
TIP: Wipe the disc gently and be sure to not scuff the vinyl – you may want to apply another coat of dye.
10. Inspect the disc. If you want to deepen the color and/or add additional colors – completely dry the disc and repeat these steps.
TIP: Be sure to press down on all the edges and bubbles before re-dyeing the disc.
11. When your disc is finished – tear off the stencil and dry it. Tweezers are useful.
TIP: If there is 'sticky' adhesive residue left behind on the disc; wait about an hour or more and rub it clean using isopropyl alcohol.
